

weSKATE 3.5 with ISILink

weSKATE 3.5 Class Management Software with ISILink is like having an assistant — but it's FREE!

The ISI is proud to introduce the latest version of its *weSKATE* with *ISILink* Class Management Software package. This software is an invaluable tool that plans, organizes and manages details of your ISI learn-to-skate program. There are two different versions, the network version and the single user version. The new, network-capable version allows multiple computers in your arena to access the weSKATE database at the same time. Skating directors can now easily share information and functions of their choice. The single-user version can only be used on one computer.

Which version is right for you? [COMPARE](#)

You will need a licence key to use the weSKATE program, contact Jeff@skateisi.org include your administrative ISI number.
